How to Use This Document

Hi Bello, this is your single source of truth for everything CreditChek has built, what is live, what is being shipped this week, and what is queued for the rest of 2026. It follows four columns throughout:

- Project/Work Title — the product, feature, or work item.
- Status — Live / Shipping this week / In Development / Testing / Planned / Conceptualization.
- Handover Plan — what you need to know, own, or pick up.
- Links + Contact — where to find it and who to talk to.

Key access points you will need on day one:

- Product docs: <https://docs.creditcheq.africa/intro>
- B2B login: <https://app.creditcheq.africa/auth/login>
- Primary contact: John — john@creditcheq.africa

1. Company Snapshot

CreditChek has evolved from a credit-checking and verification tool into a full-stack credit intelligence infrastructure company serving lenders, fintechs, merchants, financial institutions, diaspora-facing businesses, and individual consumers across Africa and beyond.

The platform is delivered through six channels: B2B Dashboard, API, SDK, Enterprise Dashboards (CreditCliq Enterprise), Mobile Apps (CreditCliq Consumer), and admin-controlled product modules (EagleEye).

2025 Recap (context for goals):

- Revenue: ₦226M

- Total businesses: 209
- New businesses onboarded: 96
- API calls: 1M+

Markets live today:

- Nigeria — full product suite (primary market) billed in NGN and (+ USD wallet)
- Kenya — Income Insight, Credit Insight, Identity Insight; billed in KES and (+ USD wallet)
- Uganda — Income Insight only; billed in UGX (+ USD wallet); subscription-based pricing

2. Master Status Table — Everything at a Glance

Project/Work Title	Status	Handover Plan	Links + Contact
Credit Insight	Live (NG, KE)	Core revenue product. NG bureaus: CRC, FirstCentral, Credit Registry. Bureau selection by business.	docs.credithek.africa/intro · John
Income Insight	Live (NG, KE, UG)	Bank statement / PDF analysis. KE billed KES, UG billed UGX (subscription). RAG/Chat-with-PDF planned.	docs · John
Identity Insight	Live (NG, KE)	BVN, NIN, driver's license, doc verification. Payrep BVN/NIN integration shipping this week.	docs · John
RecovaPRO	Live	Direct debit, mandates, recovery, payouts, ERM, auto credit reporting. Liveness check to be added pre-bank-entry.	docs · John

Float	Live	Lender liquidity / borrowing product. Tenor extension + loan top-up.	docs · John
Spectrum	Live	Blockchain/DLT loan-stacking visibility network. Full rollout was gated on business data submissions.	docs · John
Telco (MTN/Chenosis)	Live	New product. Phase 1 = KYC Details, KYC Verification, Number Verification. NestJS microservice, NATS broker.	docs · John
CreditCliq Enterprise	Live	Diaspora/cross-border B2B credit reports. Multi-currency, currency conversion, embassy sharing.	app.creditckek.africa · John
CreditCliq Consumer App	Live (App Store + Play Store)	Users check personal credit score/report, download, share. PAYGO. 3-bureau selection.	App Store / Play Store · John
CRIFE / Credit Cortex	Shipping this week (≤30 June)	AI risk-intelligence engine. Finetuning + risk score in final testing. Deploy to prod this week.	John
ReboundCliq	Shipping this week	First Cliq. Behavioral credit builder (Build + Repair). In testing, deploy this week.	John
Payrep Integration (BVN/NIN basic + premium)	In Dev — due Wed (≈1 July)	New verification data source for Identity Insight. Complete this Wednesday.	John

EagleEye metrics accuracy	In Progress	Ongoing data-team work with Sylvia to validate product metric logic to 100% accuracy.	Sylvia (Data Team)
Cliq ecosystem (community + builders)	Live (framework) / Expanding	ReboundCliq is first live Cliq. More Cliqs (Medi/Chow/Energy/Fit/Home) planned with partners.	John
Liveness / Face Verification	Planned (H2)	Face-to-BVN matching. Add to RecovaPRO + standalone Web/Mobile SDK. Cortex integration.	John
KYC SDK	Planned	Country → ID selection → scan/upload → face capture → match. Sellable SDK.	John
Business Intelligence Platform	Planned (H2)	Aggregates Credit/Income/Recova/Identity/Spectrum/Telco data. RAG + GenAI. Subscription monetization.	John
TrustScore	Planned	Proprietary creditworthiness score (quant + qual + behavioral). Under Credit Insight.	John
Approval SDK	Concept	Partner credit prequalification / embedded approval for Cliq partners.	John
Radar	Concept	Monitoring / risk-detection / alerting layer across products.	John

3. Core B2B Products

3.1 Credit Insight — *Live*

What it is: Lets lenders assess creditworthiness of individuals and businesses before approving loans. Analyzes: credit history, active loans, past defaults, repayment behavior, outstanding obligations, credit exposure, borrowing patterns, risk level. NG bureaus: CRC, FirstCentral, Credit Registry (business chooses, or uses multi-source).

Availability: Nigeria , Kenya , Uganda  (not in v1).

Channels: Dashboard, API, SDK, CreditCliq Enterprise, CreditCliq Mobile (consumer bureau selection).

Use cases: Loan underwriting, loan-stacking detection, customer risk profiling, pre-disbursement checks, exposure monitoring.

3.2 Income Insight — *Live*

What it is: Analyzes customer bank statements to understand income, cash flow, affordability, repayment capacity. Intake: Manual dashboard upload, secure customer upload link, API/SDK, PDF analysis.

Analyzes: average income, salary inflows, cash-flow consistency, spending, recurring expenses, balance trends, transaction behavior, repayment capacity, affordability indicators, stability signals.

Availability: Nigeria , Kenya  (KES wallet), Uganda  (UGX wallet + subscription).

Roadmap (Planned): Chat-with-PDF, RAG-powered analysis, multi-file upload, 6-month PDF retention for GenAI, subscription-based PDF analysis, AI income summaries, BI dashboards.

3.3 Identity Insight — *Live*

What it is: Verifies customer identity/authenticity via BVN, NIN, driver's license, and government-issued docs.

Use cases: Onboarding, fraud prevention, KYC, identity matching, document verification, loan application validation, compliance. Channels: Dashboard, API, SDK.

⚠ Active work: Payrep integration for BVN and NIN (Basic + Premium) is underway, due this Wednesday (~1 July). This adds a new verification data source. You should track go-live and confirm billing wiring.

3.4 RecovaPRO — *Live*

What it is: Direct debit, repayment automation, and loan-recovery product. One of CreditChek's most strategically important products — it recovers money *after* disbursement. Core features:

- One-time payments (min single direct debit ₦250.00; webhook on async completion)
- Recurring payments (fixed or variable)
- Automated mandates (customer-authorized)
- BVN verification as part of authorization
- Embedded Credit-Risk Management (ERM) opt-in add-on (insurance against bad debt)
- Automated credit reporting to partner bureaus (opt-in)
- Payouts — settlement Mon–Sat, 9am–6pm, 2-hour SLA
- **Planned enhancement:** Add Liveness Check right before the customer enters bank info, for added security.

3.5 Float — *Live*

Lender liquidity product: lenders borrow from CreditChek at lower rates to lend onward. Supports loan top-up and tenor extension.

3.6 Spectrum — *Live*

Decentralized (blockchain/DLT) credit-data-sharing and loan-visibility network. Solves loan stacking by giving lenders shared, immutable, cryptographically verifiable visibility into borrower activity across providers. Note: full rollout depends on businesses submitting data.

3.7 Telco — *Live*

What it is: New product housing telecom integrations for verification, KYC enrichment, and future telco-backed credit signals.

First provider: MTN via Chenosis. Phase 1 APIs: (1) KYC Details, (2) KYC Verification, (3) Number Verification.

Flow: Business selects Country → Provider → Service Name (e.g., Nigeria → MTN → KYC Details). KYC Details flow: async + consent-based — business enters MSISDN → MTN sends consent prompt → returns `PENDING_CONSENT` → customer approves → provider callback → business refreshes → details displayed.

Architecture: TypeScript, NestJS microservice, NATS message broker, integrated with Billing + Onboarding, audit logs, provider-adapter pattern.

Strategic value: Telco-backed identity/stability signals feed fraud detection, SIM stability, and Credit Cortex enrichment. (MTN is also the flagship enterprise distribution partner in the 2026 plan.)

4.0 CRIPE / Credit Cortex — *Shipping this week (≤ 30 June)*

Status: In final testing — AI fine tuning and risk score being finalized. Deploying to production this week, latest 30th June. This is the most time-sensitive item on your plate at handover.

What it is: CreditChek's AI/risk-intelligence engine powering decisions across the ecosystem — approval decisions, risk scoring, ReboundCliq behavioral scoring, liveness risk interpretation, consent-driven processing, credit-building qualification, partner prequalification, fraud detection.

Aggregates data across Credit Insight, Income Insight, RecovaPRO, Identity Insight, Spectrum, Telco, repayment history, and merchant usage into one place. Outputs: customer financial profiles, exposure summaries, income/repayment behavior, risk trends, loan performance, portfolio health, segmentation, default signals, growth insights, TrustScore. RAG/GenAI: chat-with-PDF, chat-with-reports, AI report explanation, BI chat, multi-doc analysis.

It will power: TrustScore, ReboundCliq, Cliq prequalification, Approval SDK, identity risk scoring, telco signal enrichment, credit-builder recommendations.

Handover action: Confirm prod deployment lands this week; verify AI finetuning + risk score outputs against expected accuracy with the data team.

4.2 TrustScore — *Shipped with CRIPE*

Proprietary creditworthiness metric under Credit Insight. Combines quantitative, qualitative, sentiment, financial activity, psychographic, employment, behavioral, and survey/gamification data. Accessible via API/SDK/Dashboard/BI. Powered by Credit Cortex.

5. Identity Security Products

5.1 Liveness / Face Verification — *Planned (H2)*

Compares a user's live face capture with their BVN photo.

- Primary use: added to RecovaPRO right before bank-info entry.
- Standalone: Web SDK, Mobile SDK, API.
- Features: passive + active-challenge liveness, face-to-BVN matching, deepfake detection, screen-replay detection, device intelligence, behavioral biometrics, consent before processing, Credit Cortex integration.
- Note in catalogue: Liveness checks are flagged as *currently launched* within the SDK use-case list — confirm exact production scope vs. the standalone roadmap with John.

5.2 KYC / Approval SDK — *In Design / Development*

Sellable SDK: select country → choose ID for that country → upload or camera-snap with an alignment scanner → submit → face capture with face scanner → face/ID match → success prompt. Needs full low-level flow for backend + design.

6. CreditCliq Ecosystem (Acquired)

CreditChek acquired CreditCliq, adding two products: CreditCliq Enterprise (B2B) and CreditCliq Consumer Mobile App.

6.1 CreditCliq Enterprise — *Scheduled Live*

B2B arm, like Credit Insight but for diaspora/cross-border/international use. Features: business onboarding, BVN-based credit checks, bureau selection, report generation, download, re-query, additional insights, multi-currency report viewing, currency conversion of reports, sharing with embassies/institutions/verification authorities. Cross-Border Credit Profiles (In Dev, Q1): currency switching on reports; map African credit reports into USA/Canada standard output; diaspora-focused verification; cross-border lending support.

6.2 CreditCliq Consumer Mobile App — *Live (App Store + Play Store)*

Consumer app to access/understand/download/share personal credit. Status: Live — users can currently check their personal credit report and scores. Flow: sign up → verify identity → enter BVN → select country → select bureau → choose score or full report → CreditCliq calls Credit Insight APIs → view → download → share. Bureaus: CRC, FirstCentral, Credit Registry. Pricing: PAYGO. Features: BVN verification, score check, full report, bureau selection, downloadable/shareable reports, credit recommendations, profile tracking, Cliq communities, future credit-card request, credit-building journeys.

6.3 Cliq — *Live framework, expanding*

Community + credit-building layer inside the mobile app. Curated, partner-powered communities. Access flow: open Cliq menu → prequalification assessment → if approved, marketplace unlocks → select Cliq → accept terms → join → begin journey. Planned Cliqs: ReboundCliq (live first), MediCliq, ChowCliq, EnergyCliq, FitCliq, HomeCliq — each potentially partner-powered.

6.4 ReboundCliq — *Shipping this week*

Status: First internal Cliq. Currently in testing, deploying this week. What it is: Behavioral credit-builder for users with no/thin/weak/defaulted credit. Not a cash loan — no withdrawable funds. Repayments unlock a controlled Available Balance spendable only on approved essentials.

Two paths:

- Build (no score / no history / thin file / first-timer): ₦20,000 – ₦50,000
- Repair (weak history / bad record / defaults): ₦50,000 – ₦100,000+

Stages: Both paths have Stage 1 → 2 → 3 progression based on repayment consistency, on-time payment, no overdue/default, improved profile, internal behavior score, and credit re-checks.

Three balances per loan:

- Loan Balance — approved amount, not withdrawable (e.g., ₦50,000)
- Repaid Balance — amount repaid (e.g., ₦20,000)
- Available Balance — unlocked from repayments, for approved spend (repay ₦20k, spend ₦5k airtime → ₦15k available)

Utility spend: airtime, data, electricity, future approved utilities (each with its own transaction flow/history). Repayment & grace: fund CreditCliq wallet → repay. Missed → overdue → 7–14 day grace + email/push reminders → if still unpaid, may be reported to bureaus. Admin: loan activation, stage config, interest per stage, repayment monitoring all run through EagleEye.

7. Platform Foundations

7.1 Access Channels

- Dashboard — for non-technical lenders/MFBs: manual credit checks, statement upload, income analysis, identity verification, app management, reports, usage, billing/wallet.
- SDK — embed flows (credit check, identity, KYC capture, liveness, income upload, direct-debit auth, credit-building) into partner products.
- API — backend integration: credit reports/scores, identity, income, RecovaPRO mandates, telco, CreditCliq enterprise data, BI outputs.

7.2 Multitenancy

Each business can create multiple apps (e.g., personal loans, SME, salary advance, BNPL, device financing, school-fees, regional branches). Enables monitoring of channel usage, apps per business, usage/billing per app, product adoption, revenue by channel, and risk/volume per lender.

7.3 EagleEye — Internal Admin Dashboard

The control center for the whole ecosystem.

- Business management: view/approve onboarding, assign country, assign wallets, enable/disable products, monitor usage, manage apps.
- Product config: visibility by country, access by business, module toggles, subscription types, pricing tiers.
- Billing: wallet balances, billing attempts, retry failed billing, subscription expiry, grace periods, invoices/ledger.
- CreditCliq: monitor consumer users, DAU/WAU, credit-check rate, avg engagement duration, active Cliqs, enterprise businesses.
- ReboundCliq: approve loans, configure Build/Repair stages, set interest per stage, activate balances, monitor repayments/grace/overdue, track available balance + utility purchases, trigger reporting.
-  Active work: Metrics accuracy validation with Sylvia (Data Team) — ensuring all product metrics match the logic and expected accuracy. Pick this up and track to 100%.

8. Country Expansion & Localization

Market	Products Live	Billing	Model	Notes
Nigeria	Full suite (Credit, Income, Identity, RecovaPRO, Spectrum, Telco, Float, Liveness, CreditCliq, Cliq/ReboundCliq, bureau + BVN services)	NGN	PAYGO-first	Primary, most complete market

Kenya	Income Insight, Credit Insight, Identity Insight	KES	PAYGO	Needs country scoping, wallet, billing localization
Uganda	Income Insight only	UGX (+USD wallet)	Subscription	See pricing below

Uganda onboarding & pricing:

- One-off onboarding fee: UGX 2,500,000 (pitched by sales before platform approval)
- Platform Access & Support Fee: quarterly (90 days) or annually (365 days)
 - Tier 1: UGX 75,000/mo — up to 100 analyses/mo
 - Tier 2: UGX 150,000/mo — up to 200 analyses/mo
 - Tier 3: UGX 200,000/mo — 500–10,000 analyses/mo
- PAYGO rates:
 - Tier 1: UGX 10,000 / PDF statement
 - Tier 2: UGX 7,000 / PDF statement
 - Tier 3: UGX 5,000 / PDF statement
- Exhausting monthly limit → continue on PAYGO at +20% over the tier's PAYGO rate.
- Onboarding flow: select Uganda → assign UGX + USD wallets → profiled onto subscription plan automatically.
- Infra needed: product scoping by country + by business, wallet-based subscription billing, quarterly/annual cycles, prorated upgrades, grace periods, reminders, admin-controlled access, custom enterprise pricing.

9. 2026 Strategic Context (from the 2026 Plan)

North Star: Be the default credit verification and trust infrastructure powering mass-market and enterprise financial products across Africa.

Company-level goals:

- Verifications: 3–5× 2025 (min 5M API calls)
- Revenue: 3–5× YoY (min ₦600M)
- Gross margin: maintain/improve (+60%)
- Enterprise partners: 3–5 deeply integrated, high-volume
- Market footprint: 2–3 core countries at scale

Product pillars:

1. Core Verification Engine — faster response, higher match accuracy (data consistency), reliability, deepen Identity Insight.
2. Enterprise Integrations — MTN-led use cases (lending, telco trust scoring, analytics), deep APIs & SDKs, SLAs/monitoring/enterprise tooling.
3. Trust Layer (lightweight) — decision support, not full scoring products.

Tech priorities: scalability for 10× load, observability/uptime/redundancy, aggressive tech-debt reduction, automation to cut per-verification cost, compliance (pen testing, ISO, cybersecurity).

2026 rule: *If it doesn't increase verifications, revenue, or reliability — deprioritize it.*

GTM: Primary = high-quality fintechs (CredPal-class) + diversify ICP (MFBs, insurance, recruitment, embassy). Secondary = enterprise/telco-led with MTN as flagship. Note in plan: be wary of insurance companies.

Expansion: aggressively expand data coverage across 10 countries; one additional operational market (e.g., Kenya; then Uganda/Rwanda/Ghana/South Africa based on traction); enter via pilot partners, regulatory readiness first, one market at a time.

10. H2 2026 Build Queue (What's Next)

Pulled from the 2026 Product Roadmap + Plan, sequenced for the incoming PM:

Work Item	Roadmap Phase	Notes
CRIPE / Credit Cortex to prod	Now (≤30 June)	AI finetuning + risk score
ReboundCliq to prod	Now (this week)	First Cliq live
Payrep BVN/NIN (basic + premium)	Now (Wed ~1 July)	Identity Insight data source
EagleEye metrics accuracy (w/ Sylvia)	Ongoing	100% logic + accuracy
Income Insight AI PDF Analyser + extra metrics	Q1	Testing
AI Chatbot for Income Insight metrics	Q1	In Dev
Identity Insight Expansion — NIMC Direct Access	Q2	Concept
Web & Mobile SDK Enterprise "Approvals" flow	Q2	Concept/Design
Business Intelligence Dashboard (predictive + viz)	H2	Planned
Premium Subscription Model	H2	Planned
RecovaPro for diaspora (Stripe; UK BACS, EU SEPA, USA ACH, CA/AU pre-approved; foreign direct debit on 2nd obligor)	Q3	Concept

EagleEye additional metrics (drop-offs, churn, crash, real-time)	—	Continuous
CreditCliq Dashboard in EagleEye (DAU/WAU, check rate, engagement, active Cliqs)	Q3/Q4	Testing
CreditCliq Consumer app updates (Flutter refactor, multi-bureau, full report+score, BVN validation on sign-up, address autocomplete via Starlink/Google Maps)	Q1	In Dev
Usage-based reward system (consumer app)	Q1	Concept
Cliq community (credit-link discussions)	Q2	Concept
Cross-Border Credit Profiles (CreditCliq Enterprise)	Q1	In Dev
TrustScore	Planned	Cortex-powered
Liveness / Face Verification (RecovaPRO + standalone SDK)	H2	Planned
KYC SDK	Planned	Sellable
Radar	Concept	Monitoring layer
More Cliqs (Medi/Chow/Energy/Fit/Home)	Concept	Partner-powered

11. Risks & Watch-Outs

- Over-reliance on one business → diversify to 3–5 enterprise anchors.
- Data quality → invest in validation & monitoring (the EagleEye + Sylvia work directly addresses this).
- Regulatory changes → early engagement + local advisors before each market launch.
- Execution fatigue → fewer priorities, clearer focus.
- Spectrum adoption depends on businesses submitting data — adoption flywheel to watch.
- Insurance partners — proceed cautiously per the 2026 plan.

12. Strategic Positioning (Why It All Connects)

CreditChek now covers the full credit lifecycle: identity verification → income analysis → credit assessment → repayment automation (RecovaPRO) → data sharing (Spectrum) → telecom verification (Telco) → business intelligence → consumer monitoring (CreditCliq) → behavioral credit building (ReboundCliq).

The loop: Businesses use CreditChek to make better credit decisions. Consumers use CreditCliq to understand and improve their credit. Cliq + ReboundCliq help users manufacture positive credit behavior. CreditChek's B2B infrastructure helps lenders trust those users. CreditCliq Enterprise helps diaspora businesses understand African credit globally. CreditChek doesn't just analyze creditworthiness — it helps create, improve, verify, and distribute it across markets.
